

Koi on Demand

Beautiful (KHV free) koi and all types of gold fish from Israel

Israel is one of the largest exporters of Ornamental Fish in the world and the second largest exporter to the European Union. Almost all varieties of Coldwater fish and many Tropical and Marine varieties are grown successfully in Israel. All fish are system or pond grown in intensive or semi intensive recirc facilities. Total exports of Ornamental Fish from Israel have been growing over the last decade from about 15 million dollars in 2004 to about 23 million dollars in 2014.

Modern farming and animal rearing today demands a holistic approach and must therefore concern itself more with prevention. Unless the background challenge from disease causing organisms can be controlled, and good management practices strictly followed, medication and vaccination alone are not capable of adequately protecting fish stocks. A Biosecure environment is not a sterile one – and fish in a Biosecure system are exposed to the pathogens they would eventually be exposed to at their final destination (a garden pond, for example). However, in a Biosecure environment the level of infection is controlled to the point where medication can achieve beneficial effects. In short, a Biosecure system aims to prevent, or seriously limit, the entry of specific dangerous pathogens as well as unknown pathogens to the production site. In the unlikely event one of these does enter the production site, its transmission to customers can be prevented, while infected stock is treated or (if absolutely necessary, in the case of a contagious or fatal disease) destroyed and the production site can be completely disinfected.

Goldfish are one of the all-time favorites of fish keepers everywhere. Why? Because they are beautiful and fun to watch. They have a good memory and becoming very sociable with their keepers.

Most of the commonly available goldfish varieties are also relatively easy to care for.

Originating from Asia (Siberia), goldfish are one of the first aquatic animals in recorded history to be kept as pets. The majority of the fancy goldfish have been developed by Oriental breeders. It is estimated that there are over 125 types of gold fish. There is a wide variety of beautiful goldfish colors that can be metallic, iridescent, or flat and they come in many interesting forms.

Many goldfish types are very hardy species, especially the Common goldfish and the Comet Goldfish. These two are great for beginners. Both the Fantail Goldfish and Shubunkin Goldfish are also good beginner fish. Other hardier types include Black Moor Goldfish and the Ryukin Goldfish. Once you've gained experience and confidence in keeping these hardier goldfish, try some of the more delicate fancy goldfish like the Bubble-eye Goldfish, Celestial Goldfish, Oranda Goldfish or Lionheads.

We're looking for distributors and wholesalers to market our top quality fish (Koi Carp & All Type of Gold Fish) in the US.

Our farm specializes in Koi Carp (KHV Free) and all types of Goldfish.
